Research Currently in Progress

"AN INVESTIGATION INTO FACTORS INFLUENCING E-GOVERNMENT SERVICE DELIVERY PERFORMANCE:" (Writing Results).
The objective of this research is to investigate into factors influencing E-government service delivery performance. Interview data collected from 19 County veteran service officers (CVSOs), using the GRO web portals, shows that online cooperation and online partnership of service have a significant impact on government service delivery performance. However, the impact of online empowerment and online understanding veteran expectations on government service delivery performance has not been significant in this study. At the close of this article, the managerial and theoretical implications of the results are discussed.

"An Investigation of IT Strategic Implementation: the case of Center IC software program of North Dakota SBDC." (On-Going).
The purpose of this report is twofold: first, to apply the IT implementation model of completion stages to the case of ND SBDC's IT implementation project; second, to strategically and successfully implement Center IC (CRM enabler) software into the ND SBDC and UND CoBPA in order to collect and analyze business statistics data generated through the interactions between ND SBDC and ND SBs. Those data should be used by ND SBDC consultants for numerous investigations and to track ND SBDC performance measures and

economic impacts. Based on those data, researchers should develop research models showing the impacts of business variables on others. Those research models can serve as theoretical foundations to the formulation of research hypotheses which need to be tested using the data found in the Center IC software program.

"Applying The Balanced Scorecard To Government-to-Government E-Service Delivery Performance" (On-Going).

"CRM Implementation in SBDC: a case study" (Writing Results).
The importance of CRM implementation has been revealed by different authors in both academia and industry. A number of studies have made the point that IT has strategic implication and that its implementation has to be aligned with the firms' competitive needs (Duh et al., 2006). While some organizations are able to succeed their CRM implementation, others are likely to fail it. One of the reasons behind the failure of CRM strategy is the inefficiency when implementing it (Mendoza et al., 2007). According to Gartner Group, the rate of successful CRM implementations is below 30% (Kim and Kim, 2008). Each company CRM implementation strategy requires a unique and innovative approach that will be difficult to be reused in the situation of another company.

Case Study of SBDC of North Dakota

"Electronic Commerce: A Long Term Dynamic Model of the Impact of Web Site Characteristics on the Business to Business Transactions" (On-Going).
This research deals with a Long-Term Dynamic Model of the Impact of Web Site Characteristics on Business to Business Transactions. The dynamic model is a mathematical system that is used to express and represent the physical behavior of the system over time. It shows and describes time dependent behavior that a static model does not.

"Using Resource–Based View Theory (RBV) to Investigate the Impact of Wireless Technology in Organizational Performance" (On-Going).
CoBPA has founded (summer 2007 grant) this paper.

This study intends to show that rather, it is the manner in which firms leverage their Wireless Technology investment to create unique capabilities that impact a firm's overall performance. According to the RBV theory, the benefits of superior IT capability must be sustainable over time. Although some important work has been undertaken, the Wireless Technology and firm performance relations are not adequately represented in current IS research. Also the past studies did not indicate that as time goes on, the relationship between Wireless Technology investment and performance shows improvements. This study is a first effort toward this end. The objective of this study is to introduce mediating or moderating variables to impact the relation between Wireless Technology and firm performance.
